Toasts Tooltips

> Helpers

Alerts are available for any length of text, as well as an optional close button. For proper styling, use one of the eight **required** contextual classes (e.g., .alert-success). For inline dismissal, use the <u>alerts</u> <u>JavaScript plugin</u>.

A simple primary alert—check it out! A simple secondary alert-check it out! A simple success alert-check it out! A simple danger alert—check it out! A simple warning alert—check it out! A simple info alert—check it out! A simple light alert-check it out! A simple dark alert-check it out!

```
<div class="alert alert-primary" role="alert">
    A simple primary alert-check it out!
</div>
<div class="alert alert-secondary" role="alert">
    A simple secondary alert-check it out!
</div>
<div class="alert alert-success" role="alert">
    A simple success alert-check it out!
</div>
<div class="alert alert-danger" role="alert"></div>
<div class="alert alert-danger" role="alert"></div></div></div></div></div></div</pre>
```

```
A simple danger alert—check it out!

</div>
<div class="alert alert-warning" role="alert">
    A simple warning alert—check it out!

</div>
<div class="alert alert-info" role="alert">
    A simple info alert—check it out!

</div>
<div class="alert alert-light" role="alert">
    A simple light alert—check it out!

</div>
<div class="alert alert-dark" role="alert">
    A simple dark alert—check it out!

</div>
</div>
```

Conveying meaning to assistive technologies

Using color to add meaning only provides a visual indication, which will not be conveyed to users of assistive technologies – such as screen readers. Ensure that information denoted by the color is either obvious from the content itself (e.g. the visible text), or is included through alternative means, such as additional text hidden with the .visually-hidden class.

Link color

Use the .alert-link utility class to quickly provide matching colored links within any alert.

A simple primary alert with <u>an example link</u>. Give it a click if you like.

A simple secondary alert with **an example link**. Give it a click if you like.

A simple success alert with **an example link**. Give it a click if you like.

A simple danger alert with <u>an example link</u>. Give it a click if you like.

A simple warning alert with <u>an example link</u>. Give it a click if you like.

A simple info alert with <u>an example link</u>. Give it a click if you like.

A simple light alert with **an example link**. Give it a click if you like.

A simple dark alert with **an example link**. Give it a click if you like.

```
Сору
<div class="alert alert-primary" role="alert">
 A simple primary alert with <a href="#" class="alert-l
</div>
<div class="alert alert-secondary" role="alert">
 A simple secondary alert with <a href="#" class="alert
</div>
<div class="alert alert-success" role="alert">
 A simple success alert with <a href="#" class="alert-l
</div>
<div class="alert alert-danger" role="alert">
 A simple danger alert with <a href="#" class="alert-li
</div>
<div class="alert alert-warning" role="alert">
 A simple warning alert with <a href="#" class="alert-l
</div>
<div class="alert alert-info" role="alert">
 A simple info alert with <a href="#" class="alert-link"
</div>
<div class="alert alert-light" role="alert">
 A simple light alert with <a href="#" class="alert-lin"
```

```
</div>
<div class="alert alert-dark" role="alert">
 A simple dark alert with <a href="#" class="alert-link"
</div>
```

Additional content

Alerts can also contain additional HTML elements like headings, paragraphs and dividers.

Well done!

Aww yeah, you successfully read this important alert message. This example text is going to run a bit longer so that you can see how spacing within an alert works with this kind of content.

Whenever you need to, be sure to use margin utilities to keep things nice and tidy.

```
Сору
<div class="alert alert-success" role="alert">
 <h4 class="alert-heading">Well done!</h4>
 Aww yeah, you successfully read this important aler
 <hr>
 Whenever you need to, be sure to use m
</div>
```

Icons

Similarly, you can use <u>flexbox utilities</u> and <u>Bootstrap Icons</u> to create alerts with icons. Depending on your icons and content, you may want to add more utilities or custom styles.

An example alert with an icon

Need more than one icon for your alerts? Consider using more Bootstrap lcons and making a local SVG sprite like so to easily reference the same icons repeatedly.

```
<svg class="bi flex-shrink-0 me-2" width="24" height="</pre>
  <div>
    An example alert with an icon
  </div>
</div>
<div class="alert alert-success d-flex align-items-cente"</pre>
  <svg class="bi flex-shrink-0 me-2" width="24" height="</pre>
  <div>
    An example success alert with an icon
  </div>
</div>
<div class="alert alert-warning d-flex align-items-cente"</pre>
  <svg class="bi flex-shrink-0 me-2" width="24" height="</pre>
  <div>
    An example warning alert with an icon
  </div>
</div>
<div class="alert alert-danger d-flex align-items-center</pre>
  <svg class="bi flex-shrink-0 me-2" width="24" height="</pre>
 <div>
    An example danger alert with an icon
 </div>
</div>
```

Dismissing

Using the alert JavaScript plugin, it's possible to dismiss any alert inline. Here's how:

- Be sure you've loaded the alert plugin, or the compiled Bootstrap JavaScript.
- Add a <u>close button</u> and the .alert-dismissible class, which adds extra padding to the right of the alert and positions the close button.
- On the close button, add the data-bs-dismiss="alert" attribute, which triggers the JavaScript functionality. Be sure to use the <button> element with it for proper behavior across all devices.
- To animate alerts when dismissing them, be sure to add the .fade and .show classes.

You can see this in action with a live demo:

Holy guacamole! You should check in on some of those fields below.

```
<div class="alert alert-warning alert-dismissible fades"
    <strong>Holy guacamole!</strong> You should check in o
        <button type="button" class="btn-close" data-bs-dismis
</div>
```

When an alert is dismissed, the element is completely removed from the page structure. If a keyboard user dismisses the alert using the close button, their focus will suddenly be lost and, depending on the browser, reset to the start of the page/document. For this reason, we recommend including additional JavaScript that listens for the closed.bs.alert event and programmatically sets focus() to the most appropriate location in the page. If you're planning to move focus to a non-interactive element that normally does not receive focus, make sure to add tabindex="-1" to the element.

Sass

Variables

```
Сору
$alert-padding-y:
                                 $spacer;
$alert-padding-x:
                                 $spacer;
$alert-margin-bottom:
                                 1rem;
$alert-border-radius:
                                 $border-radius;
$alert-link-font-weight:
                                 $font-weight-bold;
$alert-border-width:
                                 $border-width;
$alert-bg-scale:
                                 -80%;
                                  -70%;
$alert-border-scale:
$alert-color-scale:
                                 40%;
$alert-dismissible-padding-r:
                                 $alert-padding-x * 3; //
```

Variant mixin

Used in combination with \$theme-colors to create contextual modifier classes for our alerts.

```
@mixin alert-variant($background, $border, $color) {
  color: $color;
  @include gradient-bg($background);
  border-color: $border;

  .alert-link {
    color: shade-color($color, 20%);
  }
}
```

Loop

Loop that generates the modifier classes with the alert-variant() mixin.

```
// Generate contextual modifier classes for colorizing c

@each $state, $value in $theme-colors {
    $alert-background: shift-color($value, $alert-bg-scale
    $alert-border: shift-color($value, $alert-border-scale
    $alert-color: shift-color($value, $alert-color-scale);
    @if (contrast-ratio($alert-background, $alert-color) <
        $alert-color: mix($value, color-contrast($alert-back);
        .alert-#{$state} {
          @include alert-variant($alert-background, $alert-bor);
}
</pre>
```

JavaScript behavior

Triggers

Enable dismissal of an alert via JavaScript:

```
var alertList = document.querySelectorAll('.alert')
alertList.forEach(function (alert) {
  new bootstrap.Alert(alert)
})
```

Or with data attributes on a button within the alert, as demonstrated above:

```
<button type="button" class="btn-close" data-bs-dismiss="btn-close" data-bs-dismi
```

Note that closing an alert will remove it from the DOM.

Methods

You can create an alert instance with the alert constructor, for example:

```
var myAlert = document.getElementById('myAlert')
var bsAlert = new bootstrap.Alert(myAlert)
```

This makes an alert listen for click events on descendant elements which have the data-bs-dismiss="alert" attribute. (Not necessary when using the data-api's auto-initialization.)

Method	Description
close	Closes an alert by removing it from the DOM. If the .fade and .show classes are present on the element, the alert will fade out before it is removed.
dispose	Destroys an element's alert. (Removes stored data on the DOM element)
getInstance	Static method which allows you to get the alert instance associated to a DOM element, you can use it like this: bootstrap.Alert.getInstance(alert)

```
var alertNode = document.querySelector('.alert')
var alert = bootstrap.Alert.getInstance(alertNode)
alert.close()
```

Сору

Events

Bootstrap's alert plugin exposes a few events for hooking into alert functionality.

Event	Description
close.bs.alert	Fires immediately when the close instance method is called.
closed.bs.alert	Fired when the alert has been closed and CSS transitions have completed.

```
var myAlert = document.getElementById('myAlert')
myAlert.addEventListener('closed.bs.alert', function ()
  // do something, for instance, explicitly move focus t
  // so it doesn't get lost/reset to the start of the pa
  // document.getElementById('...').focus()
})
```
